

SESSION 2 ASSIGNMENT

Freelancing Platforms

Choose Your Best Freelancing Platform

Student Name	Mahmoud Elseady
Group Code	MNF5_SWD5_S2

Your Task: Choose one freelancing platform that best fits your specialization and goals, then identify one real opportunity or service example related to your skills.

Platform Name	DataAnnotation.tech (app.dataannotation.tech)
Platform Type	Microservice / Gig
Why It Fits Me	As a backend .NET/C# developer with a security-testing background, I'm used to analyzing logic carefully, spotting errors, and judging correctness against a clear standard — the same skills this platform's tasks require. It also does not depend on winning bids or building a public portfolio, so I can start contributing and earning based on ability alone.
How Work Is Offered	The platform does not use client-posted projects or freelancer-listed gigs in the traditional sense. Instead, after passing a short qualification assessment, the system automatically assigns available tasks (projects) matching the worker's proven skill set.
Example Opportunity / Service	A “Model Comparison” project: the worker holds a conversation with two different AI language models on the same prompt, then evaluates and compares their responses (accuracy, reasoning quality, helpfulness, and safety) to determine which one performed better.
